The assets and liabilities of all sub-funds are segregated by law.

Term

The sub-fund has no maturity date. Notwithstanding this provision, the sub-fund may be dissolved at any time by the management company.

Objectives

Investment objective

The objective of the investment policy of Phaidros Funds - Conservative (the "sub-fund") is to achieve reasonable growth in the sub-fund currency taking account of the investment risk. The sub-fund is actively managed. The composition of the portfolio is carried out by the fund manager exclusively in accordance with the criteria defined in the investment objectives/investment policy, regularly reviewed and, if necessary, adjusted. The Fund is not managed using an index as a benchmark.

Investment policy

Environmental and social aspects and principles of good corporate governance (Environment, Social, Governance - ESG) are also taken into account for the sub-fund in the investment decision-making process. Further information can be found on the website of the Management Company. The sub-fund invests its assets in securities of all kinds, including equities, bonds, money market instruments, certificates, other funds and fixed-term deposits.

The amount of investment in just one of the aforementioned investment categories (with the exception of equities and other funds) may be between 0% and 100%. Investments in equities and equity funds together are limited to a maximum of 30% of assets. The investment in other funds may not exceed 10% of the assets of the sub-fund. The sub-fund may use financial instruments whose value depends on the future prices of other assets ("derivatives") to hedge or increase assets.

Dividend policy

The income remains in the fund.

What are the risks and what could I get in return?

Risk indicator

Lower risk

Higher risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk indicator is based on the assumption that you will hold the product for 5 years.

If you cash in the investment early, the actual risk may differ significantly and you may get back less.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact our capacity to pay you.

Please be aware of currency risk if your reference currency differs from the currency of the product. You may receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Other risks not included in the risk indicator may be materially relevant:

- Liquidity risk
- Operational risk

Please see the prospectus for further information.

This product does not include protection against future market developments, so you could lose all or part of the capital invested.

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product performs, if applicable. The amounts shown here are illustrations based on an investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario.
